LÜTTI. Keeping your distance couldn't be easier

You know the problem: when concreting double-wall elements the spacer supports slip, twist or press the 2nd wall away. There are some crazy designs being used.

The company Lütkenhaus decided to seriously apply itself to solving this problem - if only because one wanted to more rationally manufacture and improve the quality of the approximate 1500,000 m² of double-wall elements produced yearly. The result is the "LÜTTI", already patented, spacer support, ideal for the job. The assembly component is easily mounted in the reinforcement, is slip-safe and stays absolutely plumb and tight in the shuttering.; tolerance ± 0.5 mm.

LÜTTI is designed for 15 mm or 30 mm concrete cover and can be supplied in all normal double-wall widths (from 12 - 40 mm).

Height in mm	Article no.
100	01900
120	01901
150	01902
