

## **BAUMA 2007**

### **The presentation of the new Upcrete-Systems met with enormous enthusiasm.**

With Upcrete-Systems, Reymann Technik and RATEC have once again set the standard at BAUMA 2007 in Munich. The presentation of the trend setting concreting technology was attended by a record-setting number of visitors.

The display model of the Upcrete Battery System (UBS), along with a movie effectively demonstrating the advantages of the Upcrete-Systems, produced high interest in the industry-savvy visitors.

During the entire exhibition the new technology was a topic of discussion with the experts at Reymann Technik and RATEC.

The many inquiries clearly demonstrate the advantages of the system - advantages that range from the modular expansion or retrofit of existing productions to the complete design of precast concrete plants. These results once again prove the strategic leadership of Reymann Technik and RATEC in development and implementation of budget- and result-oriented solutions for the precast concrete industry. See attached picture.
