

UPP CREATES BUZZ AT WOC AND MCPX 2008

At the World of Concrete show in Las Vegas and MCPX in Denver this year, crowds gathered around our models of the UPCRETE PRECAST PUMP (UPP) and Mold Systems. We had a working small-scale model demonstrating the UPP process with its intelligent overflow sensor and reverse flow mechanism. Precasters have been wanting just such a system it seems, and once again, RATEC delivers. Precise, adjustable flow, combined with a compact design, makes UPP the perfect hose- pumping solution for many Precasters. Easy to use, easy to maintain-innovation at its best! Call us today for more information on this latest breakthrough or any of our products for making precast concrete more efficient and profitable.
